Hatchery Trout Fry Stocking Plan for Washington Lowland Lakes and Ponds	18

Introduction

This publication is organized into three sections. The first section is the lowland lakes catchable trout stocking table, followed by the stream stocking table and lastly, the lowland lakes stocked last spring and fall with trout fry. Each section lists the waters by county, shows the trout species, numbers to be stocked by size, and approximate time to be stocked. The locations, dates, and times presented are based on current information, so unavoidable changes may occur.

Catchable Trout Plants

About 3 million catchable size trout (7 inches or larger) are scheduled to be stocked this spring into Washington's lowland lakes. About 70,000 trout are planned for stocking into selected streams, to provide mitigation for lost opportunity to harvest wild fish or to provide recreational opportunity in areas where habitat does not support wild trout.

Triploid Trout

For the second year in a row, the Department will purchase triploid trout averaging 1½ pounds and will stock them in 77 lakes throughout the state. These trout are sterile rainbows that are voracious feeders and have the potential to grow to trophy size. Triploid rainbow are identified as TRB under Species in the catchable trout stocking table.

Trout Fry Plants

Many lakes are stocked with two to four inch long trout fry. Trout fry are planted in the spring or fall, where they forage on natural food and grow until the following spring when they are large enough to be harvested. The survival of fry plants varies depending on the lake. Some eastern Washington lakes are managed in such a way that fry survival is good enough to be the primary source of new trout available for harvest in the spring. Western Washington lakes are primarily dependant on catchable size trout plants because of lower fry survival. However fry are stocked in some lakes to supplement the catchable trout plants.

Tips for Catching More Fish

As you read through the stocking tables, please note that many lakes are open year-round or open on March 1, and are stocked as early as February. While it may be too late this year to take advantage of this knowledge, stocking schedules are fairly consistent from year-to-year, so you may be able to get in some good early season fishing next year.

Studies have shown that trout tend to stay in the top three to five feet of water for the first week or so after stocking. This makes them easy prey for cormorants and other avian predators, which take a significant bite out of our stocking efforts each year. Your best chance for success may come within the first couple of weeks after fish are stocked. Lots of anglers on the water tends to disrupt feeding birds and thus may improve fishing later in the season.

Because trout tend to remain shallow for a while after stocking, fishing on the bottom may not be as productive in the early season as it will be later. Try shallow trolling with small lures, flies or spinner-and-bait combinations. The newer “light” trolling lures allow you to fish with spinner-and-bait rigs without the heavy pull you had to put up with in the past. When fishing from the shore, use a float to keep your bait up in the feeding zone.

Trout tend to go deeper as the lake surface warms in the late spring and summer. This is the time to try fishing on or just off the bottom, using floating paste-type baits or other buoyant baits. Trout have also been feeding more on natural food, so artificial baits may lose some of their attraction. When this happens, try natural baits such as worms, eggs, or flies and lures that imitate natural trout forage. This would also be the case in lakes managed primarily with fry plants where the fish have been feeding on natural forage since at least last fall.

New Automated License Vending System

The Department’s new automated license vending system begins this year. You will be able to purchase your license for trout season over the telephone by calling toll free 866-246-9453. The license will be mailed to your home address in 4 to 6 days. You will also be given an authorization number over the telephone that will allow you to fish immediately for trout, bass, walleye, and other freshwater species that do not require a catch record card. You will also be able to purchase your license over the web at <http://fishhunt.dfw.wa.gov> after May 1.

You can purchase an annual resident freshwater license for \$23.90 if you do not fish in saltwater. You can also purchase an annual resident combination fishing license that will allow you to fish for all species of freshwater and saltwater game fish and food fish as well as shellfish for \$41.42. If you are a non-resident, the price doubles for an annual license. After the first 8 days of the season, a person can purchase a 2 day fishing license for \$8.57, whether resident or non-resident. A real bargain! Because the Washington Department of Fish and Wildlife believes that it is important to encourage youth to learn to fish, children under 15 can fish in Washington for free whether resident or non-resident. Youths 15 years old are required to have a license, but they pay only \$7.48 for an annual combination license. The above prices include the transaction fee and dealer fee.

Hatchery Catchable Trout Stocking Plan for Washington Lakes

Please consult the *Fishing in Washington* sportfishing regulation pamphlet for seasons and special regulations.

RB = Rainbow trout; TRB = Triploid rainbow trout; BT = Brown trout; EB = Brook trout;
CT = Cutthroat trout; KO = Kokanee
